

GDIESEL® – THE WORLD’S BEST DIESEL FUEL™

WHAT IS “GDIESEL”?

GDiesel is the next generation of diesel fuel! It is an Ultra Low Sulfur Diesel (ULSD) fuel that meets or exceeds all ASTM D975 specifications, yet provides significant benefits to users over traditional ULSD. Most significantly, GDiesel’s superior characteristics are available to all diesel users with no modifications to new or existing engines, vehicles, pumps, or fuel receipt and storage infrastructure. It is a “drop-in” fuel that can generate significant savings for users from the first tank load. *How can GDiesel help you?*

IMMEDIATE FUEL COST SAVINGS FROM IMPROVED FUEL EFFICIENCY

1

GDiesel is created by re-refining ULSD into a more cleanly burning product with a higher usable energy content. Higher energy content translates directly to improved fuel efficiency and engine power. Over 25 million gallons of GDiesel has been sold to thousands of customers with 100% satisfaction. Those happy customers have independently reported a universal improvement in mileage ranging anywhere from 10 to 35% in every type of vehicle and engine - 10 to 35%! Increasing gas mileage directly reduces what you spend on fuel. A 10% reduction on 10,000 gallons a day would save you \$3,500 – each and every day....

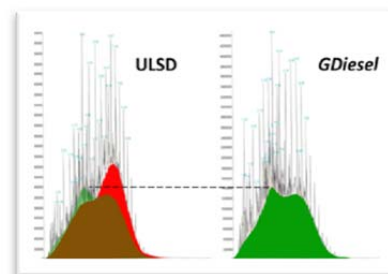

GDiesel Refinery, McCarran, NV

LONG TERM REDUCTION IN MAINTENANCE COSTS

2

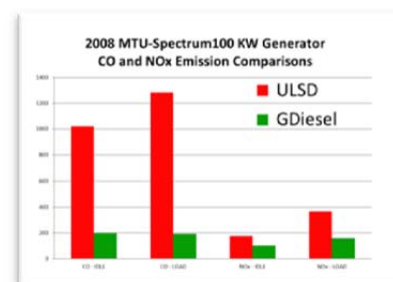

GDiesel’s patented, closed-loop re-refinement process takes the asymmetrical distribution of hydrocarbon chains in ULSD and transforms it into a more uniform output. Shorter length hydrocarbon molecules combust more completely than longer chain molecules, thereby producing less carbon deposits and residue inside an engine. A cleaner burning fuel leaves a cleaner engine, requiring less long term maintenance. Customer testimonies from those 25 million gallons consumed report significantly reduced costs on engine filters and overhauls. Your maintenance budget will go down using GDiesel.

REDUCED GREENHOUSE GAS EMISSIONS

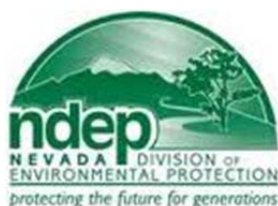

3

The more uniform hydrocarbon chain distribution in GDiesel allows more complete combustion in an engine. This results in reduced CO₂ and NO_x exhaust emissions as well as reduced smoke and odor. On 16 August 2010, the State of Nevada Division of Environmental Protection designated GDiesel as an alternative fuel under NAC 486A 140. If you are concerned with pollution emissions or air quality, GDiesel will reduce the carbon footprint of your company’s diesel vehicle fleet.

Reduced operations cost – reduced maintenance cost – reduced carbon footprint.

All available to you at the same price as traditional diesel fuel with no changes to your engines, vehicles, or fuel infrastructure. GDiesel - made in Nevada by Advanced Refining Concepts - use it and start saving immediately.

WHAT GDIESEL CUSTOMERS SAY

- IMPROVED MILES PER GALLON
- INCREASED ENGINE POWER
- REDUCED MAINTENANCE COSTS
- BETTER COLD STARTS
- REDUCED VISIBLE SMOKE & ODOR
