**ADVANCED REFINING CONCEPTS INVITED TO PRESENT AT NEVADA LEGISLATURE
HEARING ON THE PRODUCTION AND USE OF ENERGY**

Reno, Nev. – January 5, 2010 – Peter Gunnerman, co-founder of Advanced Refining Concepts, LLC, (ARC), a privately held developer and manufacturer of fuels that produce cleaner emissions and more efficient combustion, has been invited to make a presentation to the Nevada Legislature’s Legislative Commission’s Committee to Conduct an Interim Study on the Production and Use of Energy. The hearing is scheduled to be held on January 19, 2010 in Room 4401 of the Grant Sawyer State Office Building in Las Vegas.

Chaired by Senator Michael A. Schneider, the Committee is conducting an interim study on the production and use of energy in the state in an effort to develop and secure a reliable, affordable, clean and balanced energy supply for the citizens of Nevada. Mr. Gunnerman will address the Committee in this regard. The Committee expects to complete the study by June 2010 and file its report with the Legislature by September. The Legislature will likely consider the report during its 2011 session, which begins in February of next year.

“The Committee is in the process of gathering information in order to effectively implement energy-related regulations and policies to enhance the development of Nevada’s energy resources and energy infrastructure,” said Senator Schneider. “Not only is a sound energy plan important to the environment, but it is also key to stimulating economic development and creating high paying jobs.”

Gunnerman and his family have extensive experience in the industry, bringing five clean patented energy technologies to world markets over the past four decades.

“I am extremely pleased that Senator Schneider invited ARC to participate in this important hearing,” said Gunnerman. “This forum will allow us to provide valuable information about our products and the *ClearRefining*TM process and its importance to reducing green house gas emissions and reliance on imported oil.”

Developed by Advanced Refining Concepts, *ClearRefining*TM is a proprietary gas liquefaction process that allows for pollution-free and cost effective conversion of natural gas and other biogases into ultra

clean liquid motor and industrial fuels. *ClearRefining*TM is a safe and efficient low temperature, low pressure closed-loop catalytic process.

ARC is expanding its operations in Northern Nevada and is currently constructing its Peru Heights facility, a production plant that can produce 100,000 gallons per day of the company's inaugural product *GDiesel*TM, a clean and efficient domestically produced No. 1 diesel fuel.

About Advanced Refining Concepts, LLC

Advanced Refining Concepts (ARC) develops and manufactures fuels that produce cleaner emissions and more efficient combustion. ARC's products are manufactured using the company's proprietary *ClearRefining*TM process, a pollution-free, single-step method for liquefying and combining natural gas, or other biogases, with a petroleum base to form ultra clean liquid motor and industrial fuels. Replacing traditional petroleum-based fuels with the company's domestically produced fuel products reduces greenhouse gas emissions and reliance on imported oil. The company's products, *GDiesel*TM, *GPetrol*TM and *GJet*TM, are compatible with existing fuel storage and dispensing equipment and require no modifications to vehicles or power generating equipment.
