

ADVANCED REFINING CONCEPTS INCREASES **GDIESEL®** PRODUCTION

- Faced With Increased Customer Demand, Company Boosts Production 300% -

RENO, Nev. – June 9, 2010 – Advanced Refining Concepts, LLC, (ARC) a privately held developer and manufacturer of proprietary cleaner burning motor and industrial fuels, today announced a 300% increase in the production of its inaugural product, **GDiesel®**, at its pilot plant in Sparks, Nev.

Due to growing customer demand, ARC has expanded production of **GDiesel®** at the Sparks facility from 1,000 to 4,000 gallons per day. The decision to increase output comes just prior to the opening of ARC's 100,000 gallon per day **GDiesel®** production facility scheduled to open in July. The facility, named Peru Heights, sits on 10 acres owned by the company at the Tahoe Reno Industrial Center, located 10 miles east of Reno, Nev.

“We had originally planned on staying at the 1,000 gallons per day level until the Peru Heights facility opened, but **GDiesel®** has really taken off,” said Peter Gunnerman, co-founder of Advanced Refining Concepts. “The demand for our clean **GDiesel®** product far outweighed our initial estimates, which is a great result to encounter. A side benefit of the increase is that it will give our newly hired Peru Heights facility plant operators more hours to train on the equipment.”

The majority of **GDiesel®** is currently being sold to Golden Gate Petroleum, one of the largest fuel distributors in Northern Nevada and Northern California. One of ARC's initial private customers, Reno-based Anchor Concrete, has reported significant improvement in the performance of its vehicles after switching to **GDiesel®**.

“We really like the way **GDiesel®** burns a lot cleaner than diesel,” said Dan Price, president of Anchor Concrete. “The oil stays clean longer and requires less frequent changes. We also noticed our fuel mileage has gotten better. Since the price is comparable to diesel and the properties are better than diesel, we are sold.”

About Advanced Refining Concepts, LLC

Advanced Refining Concepts (ARC) develops and manufactures fuels that produce cleaner emissions and more efficient combustion. ARC's products are manufactured using the company's proprietary **ClearRefining®** process, a pollution-free, single-step method for liquefying and combining natural gas, or other biogases, with a petroleum base to form ultra clean liquid motor and industrial fuels. Replacing traditional petroleum-based fuels with the company's domestically produced fuel products reduces greenhouse gas emissions and reliance on imported oil. The company's products, **GDiesel®**, **GPetrol™** and **GJet™**, are compatible with existing fuel storage and dispensing equipment and require no modifications to vehicles or power generating equipment.
